

FREQUENTLY ASKED QUESTIONS

Q: What does SmartMeter™ do?

- A: *
- * Levels water in pool automatically
 - * Wireless sensor transmits to fill valve
 - * Helps reduce water loss
 - * Reduces cost of pool maintenance

Q: How does SmartMeter work?

A: SmartMeter senses water level electronically with **NO MOVING PARTS**. The sensor is wireless and can operate a remote valve hundreds of feet away.

Q: Can I install SmartMeter myself?

A: Properly outfitted do-it-yourself types can install the SmartMeter. It is recommended that you seek the advice of a quality professional pool service provider to help insure proper installation.

Q: How is SmartMeter powered?

- A: *
- * SmartMeter is battery operated. *
 - NO A/C power is required.
 - * Batteries last over 1 year

Q: How does SmartMeter save \$\$\$?

- A: The SmartMeter can help:
- * Prevent catastrophic water losses.
 - * Prevent accidental overfilling
 - * Reduce chemical fluctuations from inconsistent water levels

Dr. Richard A. DeVerse founded Kona Labs to apply new, high-tech sensing solutions to everyday problems. The vision began with the idea that new well engineered products you buy should pay you back. Kona Labs has assembled a top tier team of proven scientists, engineers, manufacturers, and pool professionals to focus on delivering products that meet the needs of the pool & spa industry. Products that “Pay-you-Back” in savings or peace of mind. The Kona Labs team is committed to producing high-tech sensors and products that solve problems, are affordable, reliable & easy to use.

Automatic Leveler Technology

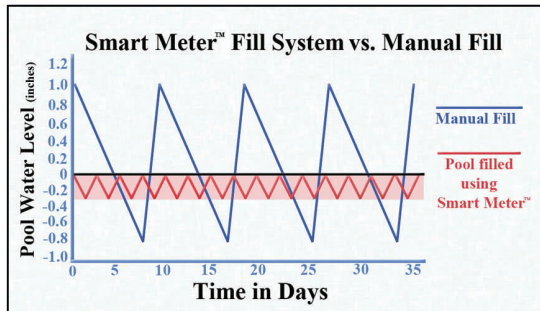

**ELIMINATES
MANUAL FILLING**

- ALL Wireless
- Over 1yr on Battery Power
- Helps Prevent Water Losses
- Sensor Hides under skimmer lid
- Non-destructive Installation
- Ask about frequent Buyer Program

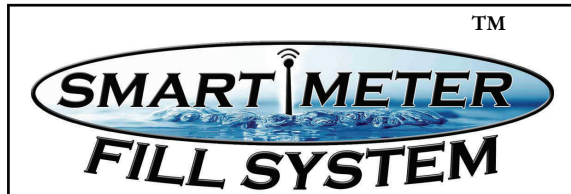

SmartMeter Fill System Advantages

Installation of SmartMeter Fill System on a “manually-filled” pool helps decrease maintenance time and maintenance costs.

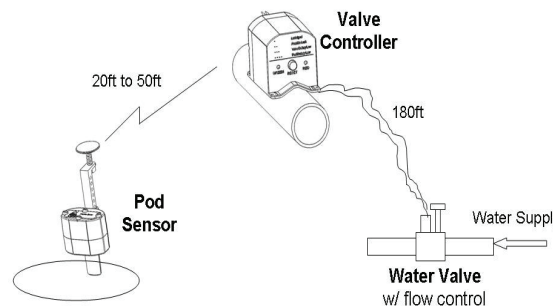

Advantages

- Low installation costs
- Non-destructive Installation
(uses existing deck/skimmer lid)
- SmartMeter stops filling pool if large water loss is detected
- Sensor is hidden under skimmer lid
- Sensor fits inside existing autolevers
- No more hose across the pool deck
- Reduces water chemistry problems*
*associated w/ over & under filled pools

Automatic Water Leveling

The SmartMeter is a water level controller that uses an electronic sensor and a wireless system to communicate with a remote water fill valve. Hiding under a skimmer lid, the electronic sensor transmits water level data to a remote valve control unit. The valve can be hundreds of feet away. It can be located at equipment to fill through the existing return lines or it can replace existing manual operated leveling valves.

INSTALLATION

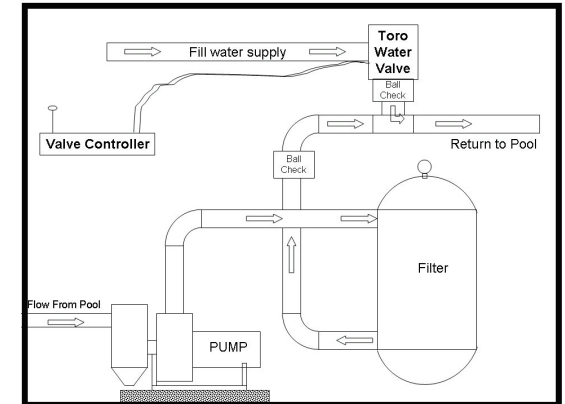

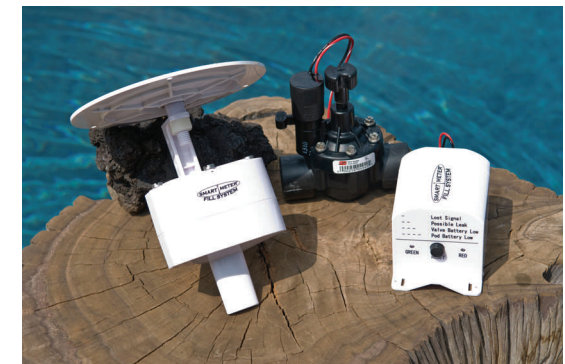

Diagram of One possible Remote Valve Location

- Affordable automatic leveler
- Eliminates manual leveling
- No deck destruction
- No pool structure work
- Simplifies pool maintenance
- Free technical support
- Upgradeable
- All battery powered !
- Professional Valve included
